
Strategic Counseling

Volpe Koenig's sole focus is intellectual property law. Our extensive strategic counseling experience assures that we can see the big picture, weighing all options and factoring in implications that could affect intellectual property portfolio value. Most clients first work with our professionals regarding specific intellectual property protection needs, then return for counsel on projects with broader scope business objectives. Strong and diverse industry backgrounds help our professionals provide clients with high value strategic counseling in hi-tech areas such as computer, mechanical, electrical and bio-chemistry technologies.

Our attorneys regularly identify, develop, and realize value in clients' patent portfolios by mining portfolios for assets related to particular products, companies, and industry standards. With pending assets, our attorneys identify potential deal driving assets and apply strategic prosecution plans to get important assets allowed. When it comes time to getting the most value from client assets in licensing, litigation, or sale, our attorneys prepare claim charts to demonstrate validity and infringement. From there, we assist in negotiations so that clients fully realize the value of their portfolios.
